

HYDRAULIC DOCK

RHJ 5000 Jumbo | RHH 5000 High Capacity Hydraulic | RHH Hydraulic | RHV Vertical Storing

Considering a hydraulic dock leveler?

There is good reason to choose one that delivers free-fall protection by way of a velocity fuse. Without this feature the leveler may rapidly descend if the truck pulls away unexpectedly, which could lead to personnel injury or damaged products and capital investments.

A properly equipped hydraulic dock leveler can help prevent rapid leveler descent, even while managing heavy loads; it can also help maintain a safe and reasonable slope from the facility floor to the trailer bed while floating below and above dock height.

Additional features and benefits:

- **Infinite Lip Control which** allows the operator to extend the lip or stop the platform at any time during leveler travel – this assists with loading expediency which enhances productivity and is accomplished with a dual push-button control box
- **Environmentally Friendly** biodegradable fluid outperforms traditional industrial grade fluid, even in extreme cold
- **Low cost of ownership** resulting from minimal required maintenance over the lifetime of the leveler

Hydraulic Dock Levelers

RHH Hydraulic Levelers require minimal maintenance and offer the lowest lifetime ownership costs.
